

WEEKLY ECONOMIC REPORT

MAY 29, 2020.

May: Recovery of the Mexican peso and stock markets

The spot exchange rate closed at MX\$22.17 per dollar on May 29th, a 9.02% monthly appreciation of the peso; therefore, the year-to-date (YTD) depreciation reduced to (-)17.11%. In contrast to what happened in March and April, this time, the Mexican peso had a positive performance, mainly due to the following reasons:

1. Recently, the dollar has weakened; specifically, since May 14th and up to date, the dollar index, which measures the value of the US currency against a basket of six currencies, has depreciated 2.13%.
2. There has been an increase in political tensions between China and the United States, mainly due to the COVID-19 and the geopolitical issue in Hong Kong. Such conflict could again hinder the trade agreement between China and the United States for the benefit of Mexican exports.
3. Mexican external accounts show resilience in the face of the world economic crisis. The balance of payments for the first quarter of 2020 (IQ'20) resulted in a positive net result of US\$6.77. The financial account showed a surplus of US\$7.75 billion and the current account had a minimum deficit of US\$980 million.

Mexican Stock Exchange

Mexbol closed May 29th operations at 36,171 points, which implies a monthly decrease of (-)0.63% in pesos. Despite the above, the sharp appreciation of the peso allowed Mexbol to have a 7.50% monthly advance in dollars. The YTD loss stands at (-)16.49% in pesos and (-) 28.92% in dollars. Even though there was adverse news for investors, such as the recent agreement by the Ministry of Energy (SENER) that negatively affects investment in renewable energy, the index displayed a better performance than the rest of the year, in a strong correlation with what happened in the stock markets of the United States.

Important news of companies with high ponderation in the index was also released during the week:

1. Walmart de México paid MX\$8.08 billion to the Tax Administration System (SAT) for a review of the sale of VIPS restaurants to the Alsea group. The company reported that the payment would be recorded in its consolidated statement of income for the three months ending June 30th, 2020.
2. Businessman, Carlos Slim, paid in advance the taxes of the companies he owns, with the intention of offering his solidarity in the face of the crisis caused by COVID-19.

Banxico Quarterly Report

The Central Bank released its quarterly report (January-March 2020). Unlike other occasions, it foresees three scenarios for economic growth:

1. In the base case scenario, Banxico expects the recession to have a deep "V" shape, where the economy will collapse by 8.8%.
2. In the "positive" scenario, the national economy will contract (-) 4.6%, its worst decline since the 2009 world crisis.
3. In the negative scenario, Banxico foresees a pronounced "U" recession, in which GDP would fall 8.3% in 2020 and 0.5% in 2021.

Regarding inflation, the Central Bank identified two relevant effects. A decrease in energy prices that has led to a fall in inflation. On the other hand, the depreciation of the Mexican currency has caused an increase in some prices. In general, the effect they expect to prevail is that of the drop in energy prices. Regarding employment, Banxico estimates that this year at least 800,000 jobs will be lost, and in the worst case, the figure could rise to 1.4 million.

Economic Indicators

Gross Domestic Product

The National Institute of Statistics, Geography, and Informatics (INEGI) released the definitive figures for the Gross Domestic Product for the IQ'20. In real terms, GDP contracted at a (-)2.2% annual rate; by components, the behavior was as follows:

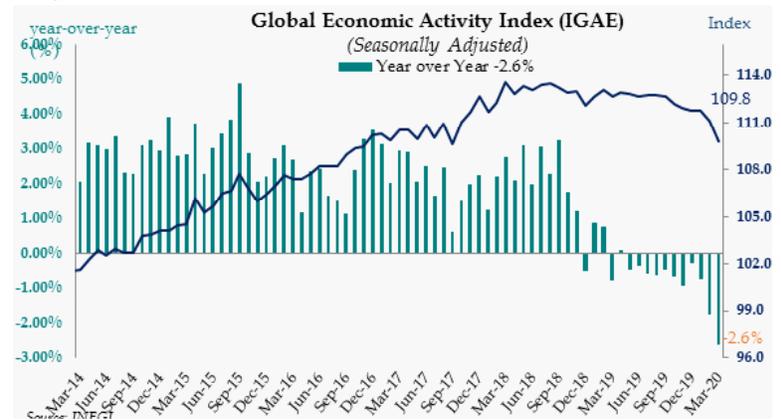

1. Primary activities (agriculture, fishing, and livestock) that represent 3.35% of GDP grew 1.1% at an annual rate.

2. Secondary activities (manufacturing, mining, construction, etc.), which totals 28.56% of the GDP, contracted (-)3.5% annually.
3. Tertiary activities (services), which weight 63.94% of total GDP, decreased (-)1.2%. The slowdown in tertiary activities denotes a worrying drop in domestic consumption. Noteworthy, same-store sales (SSS) of the National Association of Self-Service and Department Stores (ANTAD) and car sales in April contracted (-) 22.9% and (-) 64.50%, respectively.

Global Indicator of Economic Activity

March's Global Indicator of Economic Activity displayed a (-)1.3% decrease compared to the previous month. By components, primary activities grew 11.1%, secondary activities decreased (-) 3.4%, and tertiary activities decreased (-) 1.3%.

Noteworthy that the social distancing measures took effect in the last week of March, so the most substantial adverse impacts on the economy will likely be observed at IIQ20.

Balance of Payments

The balance of payments in the first quarter of the year showed a US\$7.74 billion surplus in the financial account and a small US\$980 million deficit in the current account. The above allowed the accumulation of US\$6.42 billion in international reserves in the quarter, equivalent to a 3.55% increase.

By components, the tourism balance had a deficit of US\$800 million, while remittances had a significant growth compared to the same quarter of last year and totaled US\$9.1 billion. Noteworthy, in March, the arrival of remittances totaled US\$4.02 billion, a record high for one month. Moreover, interest paid regarding the external debt totaled US\$13 billion, and the trade balance displayed a US\$3.7 billion surplus.

Regarding the financial account, Foreign Direct Investment (FDI) totaled US\$10.3 billion in 1Q20, and Portfolio investment totaled US\$1.3 billion. Moreover, the investment of Mexicans abroad totaled an outflow of (-) US\$ 1.3 billion, and there was an outflow of other investments for (-) US \$ 2.6 billion.

Trade Balance

In April, Mexico's international trade was a US\$3.08 billion deficit, reducing the YTD surplus to US\$ 635 million. The figures already reflect the world's recessionary situation and specifically the Mexican and United States economies, since both imports and exports showed sharp falls of (-) 30.5% and (-) 40.9%, respectively.

In terms of exports, the drop was due to a decrease of (-)66.4% in oil exports, a - 39.4% decline of non-oil exports, and a drop in Manufacturing of (-)41.9% as automotive industry sales abroad decreased (-)79.1%.

Regarding imports, the reduction was caused by a decrease of (-) 30.5% in oil imports, and a drop of (-) 27.6% mainly because consumer goods and intermediate use goods were not purchased since their acquisition decreased (-)46.5% and (-)28.1%, respectively.
